Point 3 here is optional but I suggest it as you then have one layer with the black frame only and behind is the layer with the main image.. In the stroke menu you have to choose "inside" Then you can still choose how much pixels you want the frame to expand inside of the image and you can choose a colour, for example black.. It is just a question how much room you have on your image to do so, without hiding the important photo elements.

Reddit Meme Economy Do you mean that you want to add a black frame around the image? There are several ways to do it.. • Keyboard Shortcuts The top graphics tablets allow you to set keyboard shortcuts to make it quicker and easier to perform certain functions.. Reddit Meme Economy If your image does still have enough room to offer on the outsides to replace it with a black border, then I would do it this way. It is just for the purpose of better editing as you now can edit both image and border separate.. • Price If you're serious about drawing, we recommend paying more for a better tablet than starting with a cheap one and then upgrading later.. This is something you should always do to have the main image untouched, incase you would like to restart editing.. The border should be already there if you did that However, it is a good idea to use the magic wand tool of photoshop and use it to click on your newly created borders.. ðŸˆ‰ If you do not have enough room for borders inside the image, then there would be another way. e828bfe731 [Download Mac Dock For Windows 7](#)
